

JASON TENG

(415) 845-3901 | jteng9@ucsc.edu | [LinkedIn](#) | [Portfolio](#)

EDUCATION

University of California - Santa Cruz

September 2024 - June 2029

PhD, Statistics

- **Coursework:** Bayesian Statistical Theory, Applied Bayesian Methods, General Linear Models, Decision Theory, Statistical Computing, Bayesian Decision Theory

University of California - Santa Barbara

September 2022 - June 2024

Master's, Statistics

GPA: 3.96

- **Coursework:** Survival Analysis, SAS Programming, Design of Experiments, Probability, Statistical Inference

RESEARCH

Bayesian Federated Learning [\[preprint\]](#) [\[software\]](#)

September 2025 - Aug 2026

- Developed Bayesian hierarchical models for multi-site mortality data, enabling inference across heterogeneous healthcare populations without sharing patient-level data
- Derived Gibbs sampling algorithms for posterior inference and implemented Bayesian models in R and Stan, with reproducible simulation and computational workflows
- Validated the methodology on large multi-site WHO verbal autopsy datasets (PHMRC, CHAMPS), demonstrating improved performance under multi-domain distribution shift

PROFESSIONAL EXPERIENCE

University of California, Santa Cruz

Santa Cruz, CA

Teaching Assistant

September 2024 - Present

- Taught 3+ undergraduate courses spanning statistical theory, probability, bioinformatics, and applied statistics
- Covered estimation, hypothesis testing, Bayesian inference, experimental design, and generalized linear models
- Led and designed R programming instruction for data wrangling, visualization, regression, GLMs, and clustering

National Instruments

Austin, TX

Supply Chain Data Science Intern

June 2024 – September 2024

- Extended univariate forecasting models to multivariate Bayesian and LSTM models, improving forecast accuracy by >20% for sparse, high-cost component demand
- Contributed to \$108 million supply chain initiative to improve demand forecast, working directly with lead DS Researcher and Supply Chain VP
- Developed reproducible data pipelines and Jupyter workflows for data cleaning, statistical modeling, and reporting

University of California, Santa Barbara

Santa Barbara, CA

Teaching Assistant

September 2022 - June 2024

- Taught undergraduate courses in probability, bioinformatics, and R programming for life science applications

Lacework

San Jose, CA

Data Science Intern

November 2021 - February 2022

- Built regression models on 40 TB of customer data to identify churn risk, contributing to a 12% reduction in churn the following quarter
- Processed large-scale Snowflake datasets with PySpark to develop customer-level product usage and retention metrics
- Presented churn analyses and customer growth trends to product managers to support retention decisions

FEATURED PROJECTS [\[Link to Full Projects\]](#)

ReproStat Lab

Research Lead

September 2025 - July 2026

- Evaluated reproducibility of 10+ statistical analyses across 3 journals in medicine, economics, and ecology
- Developed standardized workflows and criteria for reproducible statistical analysis and reporting
- Mentored undergraduate researchers in statistical reproducibility, version control, and research workflows

SKILLS

Statistical Methods: Bayesian Statistics, Survival Analysis, Longitudinal Data Analysis, Mixed-Effects Models, GLMs, Experimental Design, Time Series

Programming: R, SAS, Python, SQL, Stan, Rcpp

Tools: Git, Snowflake, Spark, dbt, Tableau
